

## 第二十六期：离散井模型-数据文件

在第 24、25 期详细讲解离散井模型的理论以及关键字之后，本期将在具体的数据文件中使用离散化井模型：

\*\*\*\*\*离散化水平井模型\*\*\*\*\*

\*\*\*\*\*定义第一段离散井筒\*\*\*\*\*

\*\*定义离散化井筒 油藏描述部分

WELLBORE 0.159

\*\*\*WELLBORE rw 定义离散井筒内径，或者是循环井的油管内径 / 此关键字表示定义离散化井筒

\*\*\*Indicates that a discretized well will be defined. Each discretized wellbore needs its own \*WELLBORE keyword.

\*\*\*Quantity "rw" is the inside well radius (m | ft | cm), or inside tubing radius when well is circulating.

\*\*\*LAMINAR

\*\*\*Forces the wellbore flow to be in laminar mode so that the flow correlations are not used. 模拟井筒流态为层流，不使用流动相关式

\*\*\*Use this keyword for vertical or deviated wells, or runs where counter-current flow is present. 这个关键字用于直井或斜井，或者对向流的情况

```
CIRCWELL      0.18365      50      5      25      0
```

\*\*\*CIRCWELL ra i j k nwbwt (\*RELROUGH relrof) 循环井关键字格式，定义循环井信息

\*\*\*ra=Annulus inside radius (m | ft | cm), which must be greater than the tubing radius rw. 环空内径，必须大于油管半径

\*\*\* i j k=I-J-K address of the grid block which defines the downhole end of the well (toe). 定义井筒末端网格（趾端）位置

\*\*\* This block must be at one end of the well structure defined by \*RANGE.它必须在\*RANGE 定义的井结构的一端

\*\*\*nwbwt=Number of sections (blocks) in the circulating well that do not contain tubing. 定义循环井内不包含油管的网格数

WELLINFO

\*\*\*Flags printing of detailed wellbore information. 在输出结果文件中打印详细的井筒信息标志

REGIME

\*\*\*This keyword indicates that another method for friction pressure drop calculation will be used. 这个关键字表明计算采用相应的摩阻压

降计算公式

\*\*\*It first evaluates the flow regime and then calculates friction pressure drop and liquid holdup accordingly. 首先评估流态，然后根据流态计算摩阻压降和持液率

\*\* WELLWALL            0.059425            3.738e6            \*\*Rt\_o

\*\*\* WELLWALL        rwo            hcww

定义油管（壁）参数

\*\* rwo=Tubing (wellbore) outside radius, which must not be less than tubing (wellbore) inner radius rw. 定义油管外径，其必须不小于有关内径 rw.

\*\* hcww=Tubing (wellbore) wall heat conductivity (J/m-day-C | Btu/ft-day-F | J/cm-min-C). 定义油管热传导率

\*\* ANNULUSWAL        0.186825            3.738e6        \*\*Ran\_o = Rcas\_i 定义环空参数

\*\* ANNULUSWAL        rao        (环空壁外径)            hcaw        (环空壁热传导率)

\*\* CASING            0.19                            3.738e6 5.            \*\*Rcas\_o

\*\* CASING            rcas        (套管外径)        hccas        (套管热传导率)

\*\* nwbwca (Number of grid blocks in a discretized well without casing) 离散井中没有下套管的网格数

RANGE 50:50 1:5 25:25 \*\* 定义离散井的范围

\*\*RANGE i1(:i2) j1(:j2) k1(:k2)

\*\*Indicates the addresses of grid blocks through which the wellbore penetrates.

\*\*All discretized wellbores require the first address line; a deviated well requires the second line as well. 所有的水平井都需要一行数据描述离散范围

\*\*Each address line must indicate a range in exactly one direction.

每一行地址线只表明一个方向

\*\*The total number of blocks penetrated must not exceed the dimension limit for well layers. 定义的离散范围总网格数不能超过井层的维数限制

\*\*This keyword defines only the blocks which contain the discretized wellbore.

该关键字只定义含有离散井筒的网格

\*\*For a horizontal wellbore the end that is connected to the surface will be determined 对于水平井，离散井部分与地面连接的一端是通过

井数据

\*\*by the perforation keywords in the well data section. For a deviated wellbore the two ranges defined by the 中的射孔关键字定义；对于斜井，离散部分要由两行定义

\*\*two \*RANGE lines must have exactly one block in common, which also must be at one end of each range. 必须相连接

\*\*\*\*\*定义第二段离散井筒\*\*\*\*\*
